

SQL ENGINEERING HANDBOOK

## Structured Courses

---

Self-paced learning and interactive tutorials

## Courses

Part of the [Resources Library](#) — [SQL Engineering Handbook](#)

Full structured courses, as a complement to the individual books, docs, and videos elsewhere in this library. Pair with the roadmaps in [README.md](#) rather than working through a course in isolation.

| Course                                          | Provider                              | Level                 | Best For                                                                                     | Free / Paid                                     |
|-------------------------------------------------|---------------------------------------|-----------------------|----------------------------------------------------------------------------------------------|-------------------------------------------------|
| <b>SQL</b> (full course)                        | freeCodeCamp                          | Beginner              | A complete, self-paced, project-verified fundamentals course                                 | Free                                            |
| <b>Intro to SQL: Querying and managing data</b> | Khan Academy                          | Beginner              | Bite-sized, exercise-driven lessons — good for the 15–20 minute daily-session format         | Free                                            |
| <b>SQL Tutorial</b>                             | ThoughtSpot (formerly Mode Analytics) | Beginner–Intermediate | Browser-based practice against real datasets, no local setup required                        | Free                                            |
| <b>SQL for Data Science</b>                     | Coursera (various universities)       | Beginner–Intermediate | A structured, graded course with a certificate, for readers who want external accountability | Free to audit; paid for certificate             |
| <b>SQL Fundamentals / Intermediate SQL</b>      | DataCamp                              | Beginner–Intermediate | Interactive, in-browser exercises with instant feedback after every line                     | Free tier limited; subscription for full access |

[!NOTE] Mode Analytics was acquired by ThoughtSpot; its SQL tutorial content has migrated under the ThoughtSpot brand. If you find an old mode . com link elsewhere, expect a redirect.
